

PostBidShip Mobile-Ready to Support Remote Work Reality

Neutral Digital Freight Matching Platform Accessible by the Mobile and Remote Workforce

SCOTTSDALE, Ariz., March 24, 2020 - [PostBidShip](https://www.postbidship.com), a digital freight technology company, today released its mobile-ready capabilities for immediate use by shippers and transportation providers for digital freight matching on loads. The functionality extends freight opportunities from shippers for carriers on-the-move with mobile-ready efficiency, including PostBidShip's I'LL TAKE IT™ one-click load reservations technology. PostBidShip is a digital freight matching platform for use by shippers of all sizes to collaborate with their OTR (over-the-road) private carrier networks for freight shipping. The PostBidShip mobile app is available immediately on both [iOS](https://www.apple.com/ios) and [Android](https://www.android.com).

The mobile app complements and extends PostBidShip's collaborative technology framework that includes its web portal and robust, open application programming interfaces (APIs), delivered in a model that drives all efficiencies direct to shippers and transportation providers on the platform.

Shippers can review load quotes and award loads to transportation providers. Transportation providers can use their phones to access potential loads, submit load quotes, including the I'LL TAKE IT™ one-click load reservation technology, secure load awards from shippers, and access historical load information.

At this time of unprecedented operational disruption and physical dislocation, PostBidShip accelerated its release of mobile-ready capabilities to support the real-time remote "work anywhere" collaboration reality. More mobile functionality is slated for release in the coming days. With this rollout, PostBidShip platform users can do business wherever they find themselves ... at the office, on the road, work from home and other new locations ... and not risk impacting time-sensitive load opportunities.

"As are all supply chain teams, we are mindful of the disruption of normal business with recent events and the adverse consequences on the consumer. Extending PostBidShip's digital freight matching technology through mobility makes it less disruptive to conduct business in this new reality. Shippers can do business efficiently with their private carrier network and other carriers using in a location-neutral manner" said Sam Levin, CEO of

PostBidShip. “PostBidShip’s immediate release of our mobile applications is the appropriate step making our award-winning digital freight matching technology best suited to real business needs at this critical time. We trust this simplifies platform participants doing business from wherever they find themselves, accelerating communications for all loads and getting goods to consumers faster!”

The PostBidShip digital freight matching platform, including the mobile app, is free for carriers, brokers and agents to use for securing loads. The app is included with any shipper subscription to the PostBidShip platform. Sign-up on the platform is required before using the mobile app.

About PostBidShip

PostBidShip is a neutral digital freight platform that replaces outdated workflows with quick, cost-effective and efficient matching of loads to transportation capacity in real-time, using near-time data analytics, market indices modelling and real-time digital collaboration, benefiting both parties through an optimal mix of cost, performance, convenience and asset utilization.
