

POST BID SHIP

FREIGHT MATCHING, OPTIMIZED

What is PostBidShip?

We provide the collaboration marketplace platform that shippers, carriers, brokers and 3PLs use to move loads. Our connections replace outdated manual processes with quick, cost-effective, secure and efficient collaboration. We wrap company, pricing and market intelligence information around every load you move, increasing the speed, quality, reliability and actionability of your shipping information. Serve your customers best when using PostBidShip to make informed decisions. Request a demo today.

How Does It Help Me?

We help shippers save money on their transportation spend and carriers get greater asset capacity utilization. We do this by offering a complete platform for tendering your loads to carriers or by extending your TMS with robust, secure spot market collaboration and tenderingsaving you time with labor-saving features and saving you money with optimized spot market load tendering. Our Capabilities

Private Bidding

Strengthen existing working relationships with carrier and broker partners

End the waiting and lack of centralization for your preferred carriers to quote loads. Establish real-time digital matching with your preferred, trusted transportation providers to improve collaboration and reduce operating costs. Eliminate outdated and time-intensive phone and email workflows with quick, cost-effective load matching collaboration to book more shipments faster.

Public Bidding

Find new sources of capacity from carriers and brokers

Invite pre-screened transportation providers to bid on your shipments. Find new capacity while keeping existing providers competitive.

Transparent Interactions

Save time by sharing information

See the identity and background information of all bidders. Bidders can see the current lowest quote to know what it takes to compete. Our platform provides you with automatic, instance load tenders to carriers once loads are books, taking guessing out of pickups.

Predictive Pricing

Know the daily market pricing and market intelligence

We leverage machine learning with daily extensive, actual tendered load market data sources (including over \$200 billion of financial and operational data from hundreds of carriers, brokers, and shippers) to forecast spot rates for today, next week, next month, next quarter and beyond. For each load, see forecasted lane pricing (low, high, median) and market dynamics (i.e.. tender acceptances, rejections).

Neutral Host

Provider agnostic ensures most efficient and cost-effective load matching

PostBidShip maintains provider-agnostic neutrality by being a 100% technology platform and not a broker or receiving a piece of any financial transaction. Process loads using a platform that is exclusively aligned to provide efficient collaboration between shippers and transportation providers.

Spot Contracts

Flexibility of spot with the assurance of contract

Manage high-volume predictable lanes, short-term projects and seasonal swings in shipment volumes by efficiently awarding batches of shipments to fewer providers at agreed upon price and activity volumes.

I'll Take It

Move loads faster with carrier self-assignment at published rate

For faster award times, offer providers the opportunity to win the load immediately by accepting your "I'll Take It" price.

All Historical Data Accessible

100% access to your data to perform the level of historical analysis desired

Stop searching for historical load data. PostBidShip gives you the ability to view all historical information on loads in one location. Export some or all load information for data analytics and use by other systems.

Automation Options

Features for simpler load processing

Share guidance with bidders as to acceptable bid ranges. Configure your bidding to auto-award loads based on target prices. Automatically import loads from your TMS and other systems as well as batch spreadsheet uploads. Post immediate results back to internal systems.

What's Up Next

Adding more value daily

Our exclusive focus is using technology to improve your assignment and movement of freight shipments. Let us be part of improving your supply chain execution daily!

Frequently-Asked Questions

Is PostBidShip a freight broker?

No. PostBidShip is not a freight broker nor are we compensated like a freight broker. We are a neutral party designed to efficiently connect shippers and transportation providers on our digital freight matching platform.

How are freight payments handled?

PostBidShip does not currently handle freight payments nor are we involved in the financial transaction in any way. PostBidShip serves as a technology platform that connects shippers and transportation providers and payment arrangements are worked out directly between the two parties with no middleman involved.

Is there a cost to bid on shipments?

No. Shippers pay to conduct freight auctions on PostBidShip. Shippers may invite their existing transportation providers to bid on their shipments at no cost to the transportation providers. Providers, including carriers and brokers, may also apply to join PostBidShip and, if approved, there is no cost to bid on public auction freight.

Does PostBidShip allow cars or household goods to be shipped?

No. PostBidShip serves business-to-business (B2B) freight shippers. Our clients are typically manufacturers or distributors of goods using PostBidShip on a daily basis to find truck capacity. We do allow cars, household goods or small package items to be posted to PostBidShip.

Does PostBidShip allow LTL shipments?

Yes. While most shipments posted to PostBidShip are full truckload, PostBidShip enables shippers to post both less-than-truckload (LTL) and full truckload shipments.

Does the lowest bid always win?

No. Shippers may choose any bid they wish, or no bid at all. We find that shippers award the lowest bid 80% of the time, with the second lowest bid winning 14% of the time and 6% of awards going to a bid besides the lowest two.
